

Drum Clamp

Drum Clamp - Forklifts are designed to handle moving, lifting and storing pallets. For businesses which handle items inside drums, you will need to use an attachment so as to store, move and lift them. There are numerous drum forklift attachments which you could obtain for all of your drum moving, lifting and storing requirements. These attachments are particularly utilized so as to deal with drum containers - therefore there is no chance of damage to the product or drum container when they are stored, moved or lifted.

Drum Positioner And Grab

The drum positioner could be utilized in order to load and unload drums off of racks, drum stands and vehicles. These are existing in three or four tine models. This particular accessory is fully mechanical, thus enabling the person operating it to operate all from the comfort of the lift truck seat. Able to move large and extra large plastic drums, steel, its capacity is 210 liters. This particular accessory is meant for drum pyramid stacking.

The drum grab is fork designed and mounted with the sole objective of dealing with steel drums which have rolling hoops. Even if the purpose for the design was to handle steel drums with rolling hoops, the drum grab can accommodate the moving of large and extra large plastic drums. Drum capacity maximum is 220 liters for plastic barrels and 210 for steel drums with rolling hoops.

The Rotator

The drum rotator is another lift truck attachment that mounts onto the blades themselves. Their objective is to pick up the drum and rotate it upside down. The drum is clasped into the drum rotator using a clamp which fits around the middle of the drum. The rotation is performed by either a crank handle or a continuous loop chain. The crank handle is intended for operations which happen below shoulder level. For operations which must happen higher than shoulder level, the continuous circle chain will be used.

The drum tines are simple fork or carriage mounted accessories. They are utilized for stacking and unstacking 210-liter steel drums. Stacking involves nothing fancy, merely easy horizontal positioning of the drums. The carriage-mounted attachments reduce the load center of the drums.

Automatic Tongs

Drum tongs come in semi-automatic and automatic units. They are utilized in the tight head or open topped steel drum styles. The drum forceps could be connected in a few ways to the forklift. One method is to connect them beneath a fork-mounted hook. One more way is to attach them to a carriage mounted jib or a fork-mounted jib. Both the automatic and semi-automatic have a drum capacity of 210 liters. With the automatic, there is no need for the one operating it to ever leave the seat of the forklift.

Rim Grip Handler

When drums require storage with limited spacing obtainable, the Rim Grip Drum Handler is the ideal choice in drum forklift attachments. This particular attachment would work for both the 210 L drums as well as 120 L drums. The Rim Grip Handler operates by using steel jaws to be able to grab the edge of the drum. It picks the drum up and sets it down without requiring any space between all the drums. The standard model utilized in the industry is a zinc-plated handler, even though, this particular attachment comes accessible in stainless steel for the food and drink market.
