

Fork Positioner for Forklift

Fork Positioner for Forklift - The fork positioner is actually a hydraulic device which can allow the individual driving to maneuver the lift truck without leaving the seat. They are constructed out of high quality materials and are designed to be able to endure the most demanding operations and work surroundings. Side shifting models have the added ability to laterally position the entire load or the arms so as to facilitate more accurate lifting and placement in a quicker and more efficient method.

The fork pocket is rather unique and enables the individual operating it to be able to safely swing the blades into position without any worry of damaging the positioning cylinders. This allows the operator the alternative to be able to perform independent or simultaneous fork movement, dependent upon the job requirement. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages can be transformed into fork positioners on existing units.
