

## Carriage Rollers

Carriage Rollers - Carriage rollers are specifically designed bearings that are utilized on lift masts to be able to help them operate within challenging environmental surroundings. Lift masts are often subjected to oscillations, shocks, vibrations and high dynamic and static loads. This apparatus is regularly exposed to environmental influences like cold, heat, dust, aggressive ambient air, moisture and contamination. Hence, the guidance arrangements of lift masts have to be particularly strong and have a certain high load carrying capability.

In order to help compete in a lot of various environmental conditions, carriage rollers were designed for various lift masts. While having the ability to deal with a specifically high load carrying capacity, these bearings provided an economical operational security for the guidance arrangement of the lift masts.
